MANUAL TEST PLAN – SAUCEDEMO

Project: SauceDemo E-Commerce Application
Website: https://www.saucedemo.com/
Testing Type: Manual Functional and Exploratory Testing
Tester: Ajsal Fayis M
Test Environment: macOS, Chrome Browser
Execution Status: Completed for planned manual test cases

---

1. Objective

The objective of this testing is to verify the main features of the SauceDemo e-commerce website, identify functional issues, and ensure that users can complete the shopping process successfully.

The testing focuses on login, product browsing, shopping cart operations, checkout functionality, input validation and order confirmation.

2. Scope of Testing

The following modules are included in the testing scope:

- Login and logout functionality
- Product listing and product information
- Product sorting functionality
- Add to cart and remove from cart
- Shopping cart functionality
- Checkout information and validation
- Order summary and confirmation
- User access restrictions
- Product display and UI behaviour

Out of Scope:

- Real payment gateway integration
- Backend database testing
- Security penetration testing
- Performance benchmarking

3. Types of Testing

The following testing methods are included:

3.1 Functional Testing

Verifying whether application features work according to expected behaviour, including login, product selection, cart operations and checkout.

3.2 UI Testing

Checking product images, names, descriptions, prices, buttons, forms and page layouts.

3.3 Negative Testing

Testing invalid login credentials, empty form fields and restricted user access.

3.4 Boundary-Value Testing

Checking input fields with different values, including empty, short, long and special-character inputs.

3.5 Exploratory Testing

Exploring application behaviour using different user accounts to identify unexpected issues.

3.6 Cross-Browser Considerations

Considering differences in application behaviour across browsers. Manual testing was performed in the recorded test environment; additional browser compatibility testing is not claimed unless separately executed.

4. Test Environment

Component	Details
Application	SauceDemo
Website	https://www.saucedemo.com/
Operating System	macOS
Manual Testing Browser	Brave Browser
Automation Language	Python

Automation Tool	Selenium WebDriver
Code Editor	Visual Studio Code
Test Management	Google Sheets
Bug Documentation	Google Docs / PDF

5. Test Data

The following test accounts are provided by SauceDemo:

Username	Purpose
standard_user	Normal application functionality
locked_out_user	Login restriction testing
problem_user	Testing intentional application bugs
performance_glitch_user	Testing slow-loading behaviour

Password for all accounts: `secret_sauce`

Test data was selected to verify different application behaviours and user scenarios.

6. Test Cases

A separate Google Sheets test-case register contains 10 manual test cases.

The test cases cover:

1. Login with valid credentials.
2. Login with an invalid password.
3. Login with empty fields.
4. Verify product display.
5. Sort products alphabetically.
6. Add a product to the shopping cart.
7. Remove a product from the shopping cart.
8. Enter customer checkout details.
9. Submit checkout with empty fields.
10. Complete the order and verify confirmation.

Each test case records its test ID, module, test scenario, expected result, actual result and execution status.

7. Test Execution Summary

Manual test execution was performed on the SauceDemo application using the selected test accounts.

The test-case register contains 10 recorded test cases. The latest recorded execution sheet marks all 10 as Passed.

Observed issues encountered during exploratory testing using `problem_user` were documented separately in bug reports with supporting screenshots.

8. Entry Criteria

Testing can begin when:

- The website is accessible.
- The browser is functioning correctly.
- Test credentials are available.
- The test environment is ready.
- The application is available for testing.

9. Exit Criteria

Testing is considered complete when:

- Planned test cases have recorded execution statuses.
- Actual defects are documented with reproduction steps.
- Supporting screenshots are attached where available.
- Unexecuted tests and unresolved issues are identified.
- Test results are reviewed and documented.

10. Risk Assessment

Risk	Potential Impact	Mitigation
Limited testing time	Some scenarios may remain untested	Prioritise critical user workflows
Browser-specific behaviour	Features may behave differently across browsers	Consider additional browser testing

Incomplete test coverage	Some defects may remain undiscovered	Include negative and exploratory testing
Intermittent issues	Defects may be difficult to reproduce	Record reproduction steps and evidence
Incorrect test data	Test results may become unreliable	Verify credentials and input data
Application loading delays	Test execution may be affected	Use appropriate wait conditions

11. Expected Deliverables

The following deliverables are prepared for this assignment:

- Manual test plan document
- Manual test-case register
- Bug reports
- Supporting screenshots
- Selenium automation scripts
- GitHub repository with README documentation
- Test demonstration videos

12. Conclusion

Manual testing of the SauceDemo e-commerce application was performed to evaluate its major functionalities, including login, product browsing, sorting, shopping cart operations and checkout.

A total of 10 manual test cases were recorded in the test-case register. Exploratory testing using different user accounts also helped identify unexpected application behaviours, which were documented separately with supporting screenshots.

Three automated test flows were implemented using Python and Selenium WebDriver:

- Login with valid credentials
- Add an item to the cart and complete checkout
- Login with a locked-out user and verify the error message

All three automation scripts executed successfully during testing.

The test plan, test cases, bug documentation, automation code and demonstration videos form the testing deliverables for this assignment.
